DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 43-44 have been considered but are moot in view of the new ground(s) of rejection.

Election/Restrictions

2. Applicant's election without traverse of claims 43-44 in the reply filed on 8/29/05 is acknowledged.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 43-44 are rejected under 35 U.S.C. 102(e) as being anticipated by Zoccolillo (5,287,199).

Art Unit: 2666

Regarding claim 43:

Zoccolillo discloses a switch station, which exchanges a packet with a predetermined format, comprising: a switch exchanging the packet; a control processor controlling operations of this switch station (see Fig. 1, the processor 105 connected to the switch 103 and col. 3 lines 3-33 which recite the switch being the AT&T 5ESS switch clearly anticipate a packet switch); an intra-station device, provided within this switch station, performing a communication operation according to the control information from said control processor; and an interface unit converting a data format of the control information into a data format which said switch can exchange (see col. 11 lines 3-22 which recite means for format conversion clearly reads on the interface unit converting the data format); wherein the control information is communicated through said switch, the control information is communicated according to link access protocol, and said interface unit converts the data format of the control information into the data format processed by the switch station, adds to the control information such routing information as can be identified by the switch station and routed by said interface unit at a receiving equipment, and transmits the information to the switch station (see the abstract which recite a processor connected to the switching

system receiving and analyzing the control portion of the message such as the called number and other routing information including means for converting the message to a predetermined format, adding prearranged routing information stored in the processor to the message, and delivers the message to the destination clearly anticipate the switch, the control processor, the intra-station device performing communication operation according to the control information, and the interface unit for converting a data format as in claim 43).

Regarding claim 44:

Zoccolillo disclose wherein said intra-station device comprises identifying means for identifying whether received data is subscriber data or the control information; and said intra-station device transmits the data after adding routing information, when said identifying means has received the subscribed data, to received subscriber data to be routed to a destination, and after adding the routing information, when said identifying means has received the control information, to received control information to be routed to said interface unit at said receiving equipment (see col. 4 line 49 to col. 5 line 7 and col. 14 lines 10-18 which recite means for comparing and identifying the destination address data for routing the

destination information clearly reads on the identifying means as in claim 44).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kurano et al. disclose a routing system capable of effectively processing routing information.
